

## Breast Self Examination Trainer No.1040

Simulaids Breast Self Examination (BSE) Trainer expands its new product line of more realistic feel skin products. You will no longer have to struggle with keeping the exam model clean because the new, non-toxic material is very stain resistant and cleans up easily with mild soap. The filling is a water based gel that emulates the natural consistency of a breast. The material is also very durable so that constant use in labs or teaching facilities won't wear it out or tear it.

Within the breast reside five lumps representing these disease states: cysts (fluid related), fibroadenomas, sclerosing adenosis, or fat necrosis. Refer to the diagram for the location of the lumps for palpation exercises.

Place the exam model on a table top and use normal techniques to explore and identify locations, size, and shape of the various abnormalities within the breast.
